Profile

Android engineer with 2+ years on Soundcorset, a music app with 50M+ cumulative Google Play downloads. Build and modernize Android media, authentication, billing, and WebView features in a Scala-based codebase.

Experience

Software Engineer | Onsquare | Seoul, South Korea

Aug 2024 – Present

Soundcorset | Tuner & Metronome app

- **Reduced slow cold starts** by tracing startup with Perfetto and deferring Play Billing initialization.
- **Modernized recording and playback** with MediaStore file handling, Android rename/delete permissions, MediaSession controls, and service lifecycle fixes.
- **Implemented Google and Facebook sign-in** across Android and WebView, connecting native flows to backend token validation and existing JWT sessions.
- **Connected Android and web features** through native bridges for insets, practice updates, and media navigation; supported shared recording and social flows with FCM.
- **Built a sheet-music annotation interface** for the web and Android WebView using Canvas, Pointer Events, offline IndexedDB storage, and S3 sync.
- **Extended AI Tutor audio input** for stereo recordings, mono conversion, and sample-rate adaptation; integrated ExecuTorch and tested existing tuner/AI input paths.
- **Shipped a practice-streak widget and inline rhythm editor**; improved widget queries/caching and adapted tuner/metronome layouts for tablets and edge-to-edge screens.
- **Resolved production crashes, ANRs, and lifecycle leaks** in recording, service connections, and MediaStore flows using Crashlytics and LeakCanary.
- **Optimized release bundles with R8** minification and code/resource shrinking; traced an SDK 37 debug-only failure to a library overriding a final method.
- **Upgraded Play Billing to v8** and made subscription refresh resilient to transient query failures while syncing successful updates with the server.
- **Published two Play promotional content events** selected for featuring; Play Console attributed 12K+ additional user acquisitions to the two windows.

Technical Skills

Android: Scala/Scaloid, Kotlin, Android SDK, Jetpack Compose, coroutines, Room, MediaStore, MediaSession, foreground services

Integration: WebView/native bridges, OAuth 2.0, REST APIs, TypeScript, Scala/Akka HTTP, Google Play Billing, Firebase/FCM

Quality & delivery: Perfetto, LeakCanary, Crashlytics, JUnit, R8, Android App Bundles, Gradle, Play Console

Published Android Projects

Simple Notes: Memo & Lists | Built a Kotlin notes app with rich text, categories, widgets, Room, and in-app purchases.

Pomodoro: Focus Timer | Built a Compose focus timer with custom cycles and white noise; reached a top-10 Google Play search position for 'Pomodoro,' 1K+ downloads, and roughly 100 daily active users.

Education

Bachelor's Degree, Integrated System Engineering | Inha University

2020 – 2024

GPA 4.28/4.5 | Rank 2/35 | Five Academic Excellence Awards

Languages

English (IELTS 7.5) | Korean (TOPIK Level 3)
